

ATc8DM

8" 2-Way In-Ceiling Speakers

Congratulations on your purchase of the Phoenix Gold ATc8DM In-Ceiling Speaker System. This product is designed to reproduce both channels of the audio portion of your home entertainment environment as a mono signal with accuracy and detail that will satisfy the most discriminating listener.

Please read this Installation Manual to ensure the proper installation and performance of your ATc8DM speaker.

Preparing for your Installation

Gather the necessary tools for your installation.

You will need the following tools:

- 1) A Keyhole or Drywall Saw
- 2) A Phillips Screwdriver
- 3) Masking Tape
- 4) A Pencil
- 5) A Bubble or Laser Level
- 6) A Tape Measure
- 7) A Stud Finder (recommended)
- 8) Your ATc8DM speaker

Placement

Plan your speaker placement carefully. Make certain that electrical, plumbing and any other services will not interfere within the ceiling where you plan to place your speakers. The ATc8DM speaker can be mounted in the walls or in the ceiling, but are typically used in ceilings. The speaker should be located so that it provides even coverage at your listening position. Caution should be taken not to place the speaker less than 1 foot from a bounding surface, such as a wall or corner to prevent uneven reflections of the audio signal. (See Fig. 1)

New Construction

If you are installing your speaker in new construction before the finished walls go up, Phoenix Gold offers a Pre-Construction Bracket, Part #NCC8DM that provides a stable frame that can be fastened to the wall studs or ceiling joists on 16" or 24" centers. This allows the sheetrock or other surface covering to be installed and clearly leave the opening for the ATc8DM speaker. The NCC8DM are sold as singles.

ATc8DM

Existing Construction

In most modern buildings the ceiling joists are positioned on 16" centers, providing a space between the joists of approximately 14 3/8". The ATc8DM speaker requires a mounting hole 9 5/16" in diameter. Additionally, you should allow an extra 3/4" clearance in all directions behind the ceiling surface to allow room for the doglegs that retain the frame to the ceiling surface to swing into position.

Use a stud finder to locate the joists behind the ceiling surface. Also, you should now check for obstructions like cross bracing in front of and behind the desired speaker location.

After selection of the mounting location, mark the hole to be cut out. A template is provided in the speaker box. Locate and align the template, then mark with pencil on the ceiling surface. If you are unsure whether there are obstructions behind the ceiling surface where the speaker is to be mounted cut a small hole in the center of your marked mounting location. Holding your drywall saw at a 45 degree angle (see Fig. 2) cut a square hole that you can use to locate any obstructions, should they exist.

ROOM
Figure 2

The 45 degree wedge shape of the removed surfacing material will make replacement, if necessary, a much easier task and yield a better finish when patching the work.

Once it has been determined that there are no obstructions cut the hole to mount the speaker using the drywall saw at a 90 degree angle to the ceiling surface. Cover the raw edges of the wallboard with masking tape (see Fig. 3). This will prevent the back pressure of the speaker from blowing loose gypsum dust out and on to the painted ceiling surface after installation. Do not allow the tape to extend more than 1/4" beyond the edge of the hole into the room. The frame of the ATc6 will cover and hide the tape.

ROOM
Figure 3

Next you will want to run your speaker wire to your speaker locations. A *UL rated CL3* speaker wire is recommended when running wire inside your walls. For proper wire gauge, see page four.

When running your speaker wire you should avoid having the speaker wire run parallel to the 110V power lines to avoid picking up hum and interference from the power service. If the speaker wire needs to cross a 110V power line at a right angle this is acceptable and should not create a problem.

If you are uncomfortable with running the speaker wire yourself in existing construction, it is recommended that you retain a qualified custom home installation specialist or electrician.

Installing the Speakers

Installation Tip! To further enhance the performance of your ATc8DM speaker, the ceiling joist cavity where you plan to place your speaker can be stuffed with a generous quantity of fiberglass insulation. If uninsulated, stuff the area in front of and behind the speaker opening with 6" thick insulation to a depth of approximately 2 feet beginning 1 foot in front of and 1 foot behind the speaker opening. If the insulation is foil or paper backed, face the backing away from the ATc8DM speaker. The addition of this insulation will help to prevent the unwanted transfer

of sound into the otherwise large and resonant cavity of the uninsulated ceiling.

It is now time to connect the speaker wire to the ATc8DM. Your speaker wire is usually coded to identify each conductor as either positive or negative. This can be by color coding, or one conductor may have a printed marking or at least a rib along one edge that you will not find on the other. Identify which type of polarity coding that your wire is using. You must carefully observe that the positive terminal of the speaker output on your amplifier is connected to the positive terminal of the ATc8DM speaker. Likewise, the negative terminal of the amplifier's speaker output should be connected to the negative terminal of the ATc8DM speaker.

Caution: Never connect both channels of an amplifier to the ATc8DM with the switch set to 8 ohm position.

Next make sure that the doglegs are positioned inside the frame of the speaker.

With the grill removed, place the speaker in the ceiling opening. Make sure that the speaker wire is not hanging against the speaker where it can vibrate and rattle as the speaker reproduces your music.

Next, one at a time, turn each of the four screws that operate the doglegs counter clockwise a few turns until you feel the dogleg is loose from its resting position. Now turn the screw clockwise until you feel the dogleg

Tighten all four of the mounting screws in the same manner until the speaker is properly aligned and held tight to the wall surface. *Caution: Do not over tighten!*

Painting the Speaker

Two paint shields are included in each ATc8DM speaker package. Place the paint shield inside the frame to protect the speaker. You can now safely paint the speaker's frame to match your wall surface if you desire.

When painting the grill caution should be taken to ensure that paint does not clog or congest the perforated openings in the grill. This would prevent proper operation of the grill by restricting the airflow from the individual drivers in the speaker.

ATc8DM Operation

The ATc8DM speaker is designed for use where the user desires to have sound available in an area but does not need stereo imaging. This may be because of limited space, such as a bathroom or dressing area, or a long hallway where even distribution of sound is desired but stereo imaging is impractical.

The ATc8DM uses a dual voice coil woofer and dual tweeters. The speaker has separate terminals to allow each channel of a stereo amplifier to be connected to the one speaker. Additionally, there is a switch that allows the speaker to operate at 16 ohms dual channel or 8 ohms with a single channel connected.

Caution! When connecting two amplifier channels to the ATc8DM (Dual Mono) you **must** set the switch on the rear of the ATc8DM to the 16 ohm position. By operating the ATc8DM at 16 ohms you can connect four (4) of the ATc8DM speakers to both channels of an amplifier and maintain a four ohm load. **If the ATc8DM is set to 8 ohms with two amplifier channels connected, amplifier damage will occur.**

The ATc8DM can also be operated by a single channel from an amplifier and used just like any conventional in-ceiling or in-wall speaker. In this configuration you should use the 8 ohm setting.

Removing the ATc8DM Speaker

Should it ever become necessary to remove the ATc8DM speaker from the ceiling, simply remove the grill and turn the four mounting screws counter-clockwise until you feel the doglegs lock out of position in their resting flange. The speaker should easily come out of the wall for service or replacement.

Recommended Speaker Wire Gauges

The resistance of the speaker wire in your installation can cause your speakers to perform at less than their optimum quality level. Excess resistance caused by using an undersized speaker wire can result in loss of detail and definition in the bass region of your audio program, as well as, a loss of dynamic range. Over extremely long wire runs you may even experience a loss of high frequency amplitude in the audio signal.

To prevent this effect in your installation we have recommended speaker wire gauges that should not exceed 0.5 ohms resistance over the recommended length of wire run.

For the ATc8DM speakers we suggest the following minimum speaker wire gauge be used:

- 50' or less - 16 Gauge 4-Cond. CL3
- 50' - 150' - 12 Gauge 4-Cond. CL3
- 150' - 200' - 10 Gauge 4-Cond. CL3

ATc8DM Specifications

| | |
|-------------------------------|--|
| Dual Voice Coil Woofer | 8" mica filled poly cone with butyl rubber surround |
| Tweeter | Dual 19mm Ferro-Fluid cooled tweeters |
| Frequency Response | 38Hz to 22kHz -3dB |
| Impedance | 16 or 8 ohm |
| Sensitivity | 90dB 2.83v/1m |
| Power Capacity | 200 Watts Peak Power |
| Outer Dimension | 10.75" (273mm) diameter |
| Cut Out Dimension | 9.3" (236mm) diameter |
| Mounting depth | 3.63" (92mm) |
| Weight | 6.1 lbs. (2.8kg) |

Five Year Limited Warranty

Phoenix Gold International, Inc. warrants this product against defects in materials and workmanship for a limited period of time. For a period of five (5) years from date of original purchase, we will repair or replace the product, at our option, without charge for parts and labor. Customer must pay all parts and labor charges after the limited warranty period expires. The limited warranty period for factory refurbished products expires after ninety (90) days from date of original purchase. This limited warranty applies only to purchases from authorized Phoenix Gold Retailers or Distributors. This limited warranty is extended only to the original purchaser and is valid only to consumers in the United States.

Consumers are required to provide a copy of the original sales invoice from an authorized Phoenix Gold Retailer or Distributor when making a claim against this limited warranty. This limited warranty only covers failures due to defects in materials or workmanship that occur during normal use. It does not cover failures resulting from accident, fire, flood, misuse, abuse, neglect, mishandling, misapplication, alteration, faulty installation, modification, service by anyone other than Phoenix Gold, or damage that is attributable to Acts of God. It does not cover costs of transportation to Phoenix Gold or damage in transit. The customer should return their defective product to Phoenix Gold International, Inc., freight prepaid and insured, only after receiving a Return Authorization.

Repair or replacement under the terms of this warranty does not extend the term of this warranty. Should a product prove to be defective in workmanship or material, the consumer's sole remedies will be repair or replacement as provided under the terms of this warranty. If the defective product is discontinued Phoenix Gold International, Inc. may replace the product with an equivalent or superior product at its option. Any cost of re-installation or repair of wall or ceiling surface is the sole responsibility of the customer and that cost shall not be the responsibility of Phoenix Gold International, Inc. Under no circumstances shall Phoenix Gold be liable for loss or damage, direct, consequential or incidental, arising out of the use of or inability to use the product. There are no express warranties other than described above.
